EDUCATION

Emory University

Bachelor of Science in Neuroscience, Behavior & Biology | Pre-Medical Focus

05/26
Atlanta, GA

Oxford College of Emory University

Associate of Arts

05/24
Oxford, GA

WORK EXPERIENCE

Biomedical Informatics for Parkinson's Lab – Emory University

Research Assistant | Clinical AI · Statistical Modeling · Clinical Data

Dec 2023 – Jul 2025
Atlanta, GA

- Designed and developed machine learning predictive models in Python to estimate Parkinson's disease progression, applying statistical techniques to multivariate clinical datasets and performing feature engineering and model evaluation to surface actionable biomarker insights.
- Engineered end-to-end data pipelines ingesting REM Sleep Behavior Disorder status and demographic variables, applying deep learning and optimization methods to identify patterns across large-scale, real-world health data.
- Collaborated cross-functionally with clinicians and data scientists to define research protocols, ensure HIPAA-compliant data handling, and translate complex model findings into clear, evidence-based summaries for non-technical stakeholders.

Neuroscience Behavioral Lab – Oxford College

Research Lead | Experimental Design · Quantitative Analysis

Dec 2023 – Apr 2025
Atlanta, GA

- Led an independent study on zebrafish social behavior, independently designing and constructing custom flow-through tank systems to rigorously control experimental variables and generate reproducible, quantitative datasets.
- Applied microscopic histological analysis to evaluate TBSA effects on zebrafish brain tissue, synthesizing multi-modal scientific data into structured findings presented to interdisciplinary research audiences.
- Demonstrated end-to-end scientific ownership, from hypothesis formation and experimental design through data collection, algorithmic analysis, and written reporting.

Children's Healthcare of Atlanta Hospital

Pediatric Imaging Research Contributor | Clinical AI · MRI

2024
Atlanta, GA

- Contributed to photon-counting AI MRI research, supporting protocol design and data workflows for cutting-edge pediatric imaging studies; completed three months embedded with imaging residents observing CT/MRI interpretation and diagnostic conferencing.
- Identified critical gaps in clinical AI explainability, annotation quality, and patient communication within radiology workflows — motivating the development of MERIDIAN as a human-computer interaction solution addressing a real-world, large-scale problem.

STARTUP/PROJECTS

MERIDIAN | FOUNDER | AI, Python, React, NLP, Medical Imaging APIs

[GitHub](#) 2026

- Architected a full-stack radiologist annotation platform that uses NLP to auto-generate plain-language patient summaries from imaging findings, directly solving an explainability and human-computer interaction challenge in medical AI with measurable real-world impact.
- Designed system with an explainability-first architecture informed by firsthand clinical observation, demonstrating the ability to bridge research insight and software engineering to build intelligent systems that advance society and improve patient outcomes.

Code | Python, NumPy, SciPy, Fourier Transforms

[GitHub](#) 2026

- Built a k-space decoder for MRI signal processing, implementing Fourier transform reconstruction pipelines to convert raw frequency-domain data into interpretable images — applying algorithmic foundations of optimization and mathematical computing to a scientific domain.
- Validated reconstruction fidelity against clinical imaging benchmarks using photon-counting MRI domain expertise, bridging foundational computer science techniques with applied medical imaging research.

PUBLISHED PAPERS

Nadia Priyam. *The Role of Astrocytes in the Cause of Alzheimer's Disease*. Journal of Student Research, 2021. Available on Academia.edu: independent.academia.edu/NadiaPriyam

- Authored a neuroscience research paper on astrocytes' role in Alzheimer's Disease, analyzing how astrocytes may contribute to amyloid-beta production, inflammation, nerve growth disruption, and broader mechanisms of neurodegeneration.

TECHNICAL SKILLS & CERTIFICATIONS

Programming: Python, Java | **ML & AI:** Machine Learning, Deep Learning, NLP, Computer Vision, Predictive Modeling, Data Pipelines, Optimization

Research: Experimental Design, Statistical Analysis, Clinical Data, HIPAA Protocols, Scientific Communication

Tools: NumPy, SciPy, Pandas, Jupyter, GitHub

Certifications: Radiology Society of North America Imaging AI Certificate • HIPAA & Data Privacy Awareness Certificate
